Renaissance Star Rostering Information

Renaissance Star offers a function called RDI. For Districts that use RDI to roster information, the rostering data is taken directly from Power School.

This is a highly effective way of rostering the data for use in the SLDS project.

For users who do not use RDI to roster the district and school information, Renaissance Place offers a friendly user interface to add the correct information for this information.

To make changes in district information, from the main menu chose District & Schools, then District Information. Add District State ID in the state number field and the District name in the name field.

To make changes in the school information, from the main menu choose District & Schools, then view School, then select the School, Edit School. Add 9 digit (DPI DistrictNumber + DPI PlantNumber) in the state number field. If you have any questions please Jane Hovda at Jane.Hovda@k12.nd.us

The local (Power school) district/ school numbers can be found in the District number field on either screen. Users should not change these values, as this is what was populated with RDI.
